## look

A window can only be as beautiful as the profile system that it is made from. That's why GEALAN put so many special features into its S 8000 IQ series. With it, windows can fulfill all of the demands customers place on their appearance: harmonic proportions, rounded corners, slender profiles and a brilliant, smooth surface. Moreover the S 8000 IQ profile series are available in a wide selection of acrylcolor tones and wood decors.

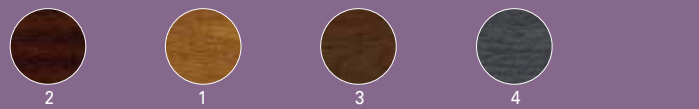

## technique

The S 8000 IQ profile series demonstrates GEALAN's consistent focus on the needs of the window market. A construction depth of 74 mm ensures excellent heat and sound insulation. Efficient use of material in the profile design saves resources and thus helps the environment. Only one steel bar is necessary for frames and casements. Improved room climate with the optional patented ventilation system GECCO (**GEALAN CLIMA CONTROL**) ensures a controlled exchange between inside and outside air.

more information at [www.gealan.net](http://www.gealan.net)

- 1 excellent insulation due to six chambers in both frame and sash
- 2 very good rigidity due to large steel stiffeners in the frame and sash
- 3 easy to clean thanks to a generously large sash rebate
- 4 available in a wide range selection of acrylcolor tones and wood decors

### wood decors

1 Mahagony	3 Hazelnut
